

Configuring your frequently used drugs list

You may have noticed a green cross icon  next to some drug names when searching for medication using the SystemOne drug & appliance browser. We have had some queries from clinicians where they have either mistaken this for our BSW Meds Optimisation Formulary, or thought it was that the medication was a preferred product

Just to clarify this green cross icon  is there to highlight drugs that you frequently prescribe. The intention of this feature was to make it easier to select medication that you prescribe on a regular basis. One issue with this, is that locally preferred products change over time in line with our local formulary or national recommendations. However the ‘frequently used drug’ icon will still appear next to what might have been previously preferred products and therefore will highlight what are now no longer formulary based options. It can be **DISABLED** or **RESET** if you find it is popping up inappropriate medication.

To **DISABLE** your frequently used drug list

Select a test patient

1. Prescribe a new acute medication – click on the ‘settings’ tab that runs along the top of drug selection screen

2. Next click on ‘Configure Frequently Used Drugs’

Configuring your frequently used drugs list

- Enter a '0' where it says, 'Include items in the top % of all drugs issued' and then click 'Ok'.

Include items in the top % of all drugs issued
